

HTML Cheat-Sheet

A Few Key Concepts:

- *Def:* A system of nested tags used to format text and graphics for a web browser.
- Every unit in HTML begins with an open tag and ends with a close tag.
- The exceptions to this rule are: ``, `
`, `<hr />`
- FILO: "First In, Last Out" `First List Item`
- External (Absolute) links require the full URL; Internal (Relative) links do not.

<code><html></code>	required for each html document, tells browser it's a web page
<code><head></code>	information about page that doesn't show in browser
<code><title></code>	the title of page (appears at top of page)
<code><body></code>	begins the portion of page that appears in browser
<code><div></code>	defines a block-level container, divides page into meaningful sections
<code></code>	applies meaning to an inline section
<code><h1>...<h6></code>	headings (large to small)
<code><p></code>	paragraph
<code></code>	unordered list
<code></code>	ordered (numbered) list
<code></code>	list item
<code><hr /></code>	horizontal rule
<code><a></code>	anchor
<code>
</code>	line break
<code><!--></code>	comments in html code that don't show in browser
<code></code>	emphasized text
<code></code>	strongly emphasized text
